

In House Cooperage Repair

We have been in the business of repairing and maintaining cooperage for 40 years. During that time we have been asked to fix virtually every type of problem you might have with a barrel - from simple bore-bug holes to multiple stave replacements when a barrel falls off a forklift. Our coopers are experienced, competent and efficient. If we can't save a barrel (or it is not worth saving) we will let you know. All work guaranteed.

Ozone Cleaning On site

Barrel Builders has a portable ozone system which we use to maintain our used cooperage which can be used to clean and sanitize customer barrels that are in for repairs. As this system is portable, we can also perform this service at your winery.
